Abstract: While the topic of assertion has recently received a fresh wave of interest from Peirce scholars, to this point no systematic account of Peirce's view of assertion has been attempted. We think that this is a lacuna that ought to be filled. Doing so will help make better sense of Peirce's pragmatism; further, what is hidden amongst various fragments is a robust pragmatist theory of assertion with unique characteristics that may have significant contemporary value. Here we aim to uncover this theory, and to show that assertion for Peirce is not a mere corollary of pragmatic conceptions of truth, judgement, and belief, but is rather a central aspect of his philosophy.
