Title: What Does it Take to Produce Interpretation? Informational, Peircean and Code-Semiotic Views on Biosemiotics

Year: 2012

Journal: Biosemiotics

Keywords: Information Codes, Interpretation, Emergence, Complex systems, Evolution, Consciousness, Peirce semiotics, Biosemiotics

Abstract: This paper presents a critical analysis of code-semiotics, which we see as the latest attempt to create paradigmatic foundation for solving the question of the emergence of life and consciousness. We view code semiotics as a an attempt to revise the empirical scientific Darwinian paradigm, and to go beyond the complex systems, emergence, self-organization, and informational paradigms, and also the selfish gene theory of Dawkins and the Peircean pragmaticist semiotic theory built on the simultaneous types of evolution. As such it is a new and bold attempt to use semiotics to solve the problems created by the evolutionary paradigm's commitment to produce a theory of how to connect the two sides of the Cartesian dualistic view of physical reality and consciousness in a consistent way.
