**Author:** Robins, Alexander  
**Title:** Peirce and Photography: Art, Semiotics, and Science  
**Year:** 2014  
**Journal:** Journal of Speculative Philosophy  
**Volume:** 28  
**Issue:** 1  
**Pages:** 1-16  
**Keywords:** Photography, Art History  
**Abstract:** In this article, I focus on Charles Sanders Peirce's viability for contemporary art history and criticism. I argue that in order to make sense of Peirce's published remarks on photographs they should be read in light of specific nineteenth-century uses of photography in experimental science. I argue that Peirce's comments on photography are consistent with a realist theory of science. It is only when these remarks are contextualized within a broader scientific project that we may begin to mine Peirce for his art historical value.
