Title: Art, science, and value as found in Peirce's ten trichotomies
Year: 2014
Journal: Semiotica
Volume: 2014
Issue: 200
Pages: 21-30
Keywords: Semiosis, Classification of Signs
Abstract: Peirce's ten trichotomies are presented as an elaboration of semeiosis, that is, a sign producing an interpretant. Sabre (2012) details how a sign can produce a metaphor, a hypothesis, or a decision. Here decision about metaphor results in art; decision about hypothesis results in science; and decision about decision, value.
