Term: Quote:	Logical Validity a leading principle, which contains no fact not implied or observable in the premisses, is termed a <i>logical principle</i> , and the argument it governs is termed a <i>complete</i> , in contradistinction to an <i>incomplete</i> , argument, or <i>enthymeme</i> . [—] We may here distinguish between <i>logical</i> and <i>extralogical</i> validity; the former being that of a complete, the latter that of an incomplete argument.
