'Object' (pub. 12.08.13-20:03). Quote in M. Bergman & S. Paavola (Eds.), *The Commens Dictionary: Peirce's Terms in His Own Words. New Edition*. Retrieved from http://www.commens.org/dictionary/entry/quote-foundations-mathematics-r.

**Term:**   Object

**Quote:**   A sign is intended to correspond to a real thing, or fact, or to something relatively real; and this *object* of the sign may be the very sign itself, as when a map is precisely superposed upon that which it maps. It is a perfection of the sign if it separately represents its object; in which case it becomes a proposition and is true or false.
