I will now give an idea of what I mean by *likely* or *verisimilar*. [—] I call that theory *likely* which is not yet proved but is supported by such evidence, that if the rest of the conceivably possible evidence *should* turn out upon examination to be of a *similar* character, the theory would be conclusively proved. Strictly speaking, matters of fact never can be demonstrably proved, since it will always remain conceivable that there should be some mistake about it.
