Term: Fact

Quote: Among the familiar ideas of logic in which the element of Secondness is

predominant, may be mentioned, in the first place, the conception of a *fact*. The easiest definition of a Fact is that it is an abstract element of the real, corresponding to a proposition. But this needlessly introduces the element of Thirdness; but it can be prescinded from it. ... A Fact may be defined as the Secondness which consists between anything and a possibility, or Firstness,

realized in that thing.
