Antecipuum

It is a difficult question whether the serial principle permits us to draw sharp lines of demarcation between the percept and the near anticipation, or say the antecip, and between the percept and the recent memory (may I be permitted to call this the ponecip, a distant and dubious memory being perhaps quite another thing?), or whether the percept is at once but an extreme case of an antecip and an extreme case of a ponecip. Or rather, - I beg the reader’s pardon for my awkwardness of statement, - the precise question is not about percept, antecip, and ponecip, but about percipuum, antecipuum, and ponecipuum, the direct and uncontrollable interpretations of percept, antecip, and ponecip.
