A pair of cuts, one within the other but not within any other cut that that other is not within, shall be called a scroll. The outer cut of the pair shall be called the \textit{outloop}, the inner cut the \textit{inloop}, of the scroll. The area of the inloop shall be termed the \textit{inner close} of the scroll; the area of the outloop, \textit{excluding the enclosure of the inloop} (and not merely its area), shall be termed the \textit{outer close} of the scroll.
