Virtual

1902 | Virtual | CP 6.372

(1) A virtual X (where X is a common noun) is something, not an X, which has the efficiency (virtus) of an X.

This is the proper meaning of the word; but (2) it has been seriously confounded with 'potential,' which is almost its contrary. For the potential X is of the nature of X, but is without actual efficiency. A virtual velocity is something not a velocity, but a displacement; but equivalent to a velocity in the formula, 'what is gained in velocity is lost in power.'

So *virtual representation* was the non-representation of the American colonies in the British Parliament, which was supposed to be replaced by something. So Milton asks whether the angels have *virtual* or immediate touch. So, too, the sun was said to be *virtualiter* on earth, that is, in its efficiency.

(3) Virtual is sometimes used to mean pertaining to virtue in the sense of an ethical habit.

...a "virtual x," where x stands for a common noun, means something which is *not* an x, but which has, for whatever purpose may be uppermost, the *virtue* of an x, that is, such properties as make it equivalent to an x.

"Virtual," followed by any common noun, say 'N,' makes an appellative phrase which denotes anything which, while it is *not* an 'N,' has, nevertheless, the characteristic behaviour and properties of an 'N.'
