**Title:** Biosemiotics

**Category:** Journal

**URL:** <http://link.springer.com/journal/12304>

**Description:** The journal Biosemiotics provides a platform for exceptional peer-reviewed papers that is as broad as the rapidly growing discipline for which it is named. Its coverage spans a range of disciplines, bridging biology, philosophy, linguistics and the communication sciences. Conceived in the insight that the genetic code is a language as old as life itself, and grounded in the study of signs, of communication and of information in organisms, biosemiotics is evolving today toward the challenge of naturalizing not only biological information but also biological meaning, in the belief that signs and codes are fundamental components of the living world. Biosemiotics offers an advanced forum for the exchange of ideas on this exciting new area of biological theory. It serves a readership comprising biosemioticians themselves, along with interested researchers in disciplines from social semiotics to community ecology, from communication science to artificial intelligence
